

vManager® Cost Center Module

On average, telecom is the fourth largest expense for mid-sized businesses. But without a management tool, it is often truly a black hole, where all charges for a branch office are lumped into its cost center, with capturing any detail.

vManager's Cost Center Dashboard Reports are the key to releasing your telecom expenses from their black hole. Customized to your business's needs, the Cost Center Dashboard Reports allow generation of ad hoc reports by any category of cost center – company, branch, department, natural GL account, etc., supplying accounting managers and CFOs unlimited visibility into telecom expenses.

During your implementation, vCom customizes your cost center module to assign inventory to its proper cost center and the appropriate allocation scheme. After that, the job of coding your vCom invoice is automated.

The result will be an A/P file which summarizes the allocated amount by Cost Center. This file can be uploaded directly into your A/P system.

vManager can be tailored to most allocation policies including:

- Assigning each inventory item (e.g., phone number, circuit, toll-free number) to their respective cost center, while shared inventory, such as voice and data circuits, are allocated proportionally.
- Assigning cost centers to inventory and by product type. Charges are allocated based on the assigned cost center by inventory and each charge can be further assigned a cost-center segment (e.g., long distance, local, data) based on the charge type.
- Allocating charges to both inventory and charge type. In this case, customers allocate recurring charges to one segment and non-recurring charges to another.

With vManager Cost Center Module, you can:

- Allocate charges down to the individual phone line
- Differentiate between charge types such as local, long, distance, etc.
- Drill down into each report to isolate charges by cost center category
- Export charts to Excel, allowing you to view each individual charge
- Upload automatically coded A/P files into your accounting system

About vCom Solutions

vCom Solutions revolutionizes the way enterprises manage their entire telecom lifecycle. vCom customers gain control over inventory, expenses and carrier relationships, achieving better business intelligence that drives profitability. vCom's Telecom Management as a Service (TMaaS) solution includes a suite of cloud-based telecom management software tools, complemented by a full portfolio of professional services.

Our powerful, cloud-based application, vManager, features:

- Consolidated and standardized invoices across products and carriers
- Inventory management with historical activity tracking and access to all of your telecom contracts
- A centralized view of procurement activities across all locations
- More than 50 built-in spend analysis reports
- Automated G/L coding and cost allocation tools to eliminate manual processes
- Customized A/P posting reports for easy upload into your accounting system
- Support for wireless invoice and inventory management coding and A/P posting reports

"We use the A/P posting module to allocate our costs to individual cost centers within the company. It gives us the granularity to look at how we're spending, when we're spending, and how much we're spending. It allows us to add descriptions and cost centers to our inventory, so when we go to do the allocations, it's all right in front of us, and we can do the posting really quickly and easily."
